# QUIZ 1

Partial Fraction  
Function and Graph  
Sequence and Series

# Question 1

Express the following as a sum of partial fractions.

a.  $\frac{2x+5}{(x-2)(x+1)}$

b.  $\frac{5x^2+17x+15}{(x+2)^2(x+1)}$

c.  $\frac{x}{(x^2-x+1)(3x-2)}$

d.  $\frac{2x^4+3x^2+1}{x^2+3x+2}$

## Question 2

a. Find the composite function  $(f \circ g)(x)$  and  $(g \circ f)(x)$  if

$$f(x) = \frac{1-x}{1+x}; 0 \leq x \leq 1$$

$$g(x) = 4x(1-x); 0 \leq x \leq 1$$

b. Let  $f(x) = x^2 - 3x$ . Determine  $g(x)$  so that  $(f \circ g)(x) = x^2 + x - 2$

c. Find the inverse of the following functions:

$$f(x) = -\frac{9x-3}{7x+6}$$

$$g(x) = 3x^5 - 9$$

$$h(x) = \sqrt[3]{9x-7}$$

## Question 3

a. Sketch the graph of the curve

$$y = \frac{x^2 + 1}{(x - 1)(x - 2)}$$

carefully labeling any turning points and asymptotes.

b. The parabola  $x = y^2 + ay + b$  crosses the parabola  $y = x^2$  at  $(1, 1)$  making right angles. Calculate the values of  $a$  and  $b$  and sketch both functions on the same plane.

## Question 4

- a. Write out the 6<sup>th</sup> to 10<sup>th</sup> terms of the following sequences and describe the sequence using the word convergent or divergent, along with the reason.

$$u_1 = 16 \text{ and } u_{n+1} = -\frac{1}{2}U_n$$

- b. Write down the general term, and evaluate  
 $1000 + 1331 + 1728 + \cdots + 4913$

## Question 4

c. Use mathematical induction to prove De Moivre's theorem

$$\left(R(\cos t + i \sin t)\right)^n = R^n(\cos nt + i \sin nt)$$
